Log-Level Data Supported - Does the supplier provide access to an always-on impression log-level data feeds to all advertisers and their agencies, as specified in the <u>TAG Certified for Transparency Guildelines</u>

Required Data Fields - Does the impression log-level data feed provided by the supplier include the data fields and the data specified in the <u>TAG TrustNet Requirements</u>

Transparency Requirements

TAG TrustNet (<u>www.tagtrust.net</u>) was launched by TAG, together with the TAG Certification for Transparency, as the major industry initiative to create a single transparent, fair and responsible Open Web programmatic marketplace based on data symmetry.

Data symmetry can become a reality if suppliers comply with some minimum requirements:

- Verification & Identification All participants need to be verified as legitimate legal entities and to be always identifiable over an ID provided by a recognized industry trade association;
- **Data Access** All suppliers need to make a contractual commitment to provide ongoing access to impression log-level data to any advertiser or publisher asking for it;
- **Data Fields** The log-level data provided by the supplier needs to comply with specified data fields including quantitative, qualitative, and financial information;
- **Matching IDs** The impression log data needs to include an ID (as defined by oRTB standards) to deterministically match impression log data across suppliers;
- **Data Matching** All parties involved in a transaction need to use an independent platform recognized by industry trade associations. This platform needs to act as a utility connecting, harmonizing and reconciling impression log-level data across the parties to come up with a unified record for every single impression, recognized by all parties as the Shared Truth. Authorized parties need to have the option to export the reconciled data over an open API.
